

AED Portable Defibrillator

Mere seconds can mean the difference between life and death. We offer the Defibtech AED portable defibrillator that can be located instantaneously, carried to the patient quickly, and used with minimal steps to analyze and treat the patient's condition.

We also provide AED training for the South Florida Area.

Defibtech has designed a revolutionary new semi-automatic external AED defibrillator that is technologically advanced enough to include all mission-critical features necessary to provide the most advanced treatment for a sudden cardiac arrest. It is, however, so simple to use that even non-medical personnel can effectively save lives. It weighs only 4 pounds.

This AED portable defibrillator was developed by experienced multidisciplinary engineering teams and incorporates state-of-the-art digital signal processing techniques and advanced ECG analysis algorithms. This enables the device to exceed the American Heart Association performance recommendations, giving the user confidence the correct therapy is being delivered. The Defibtech AED uses advanced biphasic technology – including the most studied biphasic shock waveform – and automatically adjusts the shock delivery to the person's individual needs.

For first response professionals like police, fire and EMS, this AED is standard equipment. For schools, offices, stores, malls, factories, and public places, it's becoming as vital as the fire extinguisher.

Our local service area includes Vero Beach to Miami.
